

## **Topical Pain Creams In Treating Musculoskeletal (arthritis) and Neuropathic (nerve) Pain**

Topically applied formulations of pain creams can provide efficient and painless treatments while avoiding side effects associated with medications. Non-steroids anti-inflammatory (pain relieving) medication when made into creams are useful for a range of conditions including acute and chronic pain. If you're suffering from acute or chronic pain, instead of asking for a "pain pill," consider a pain cream.
